

# Object Oriented Databases

# Who's talking?

- ▶ Nikolay Tomitov – Co-CEO at SoftAcad learning center.
- ▶ Danail Alexiev – Software Consultant at Axway, lector at SoftAcad learning center.

# Main Topics

1. Document oriented databases
2. Introduction to JSON data format
3. Meet CouchDB
4. Meet MongoDB
5. CouchDB vs. MongoDB
6. Demo

# Schema-free Document Oriented Database

## Documental Databases

## Relational Databases

# JSON Data Format

```
{  
  "day": [ 2010, 01, 23 ],  
  "products": {  
    "apple": {  
      "price": 10  
      "quantity": 6  
    },  
    "kiwi": {  
      "price": 20  
      "quantity": 2  
    }  
  },  
  "checkout": 100  
}
```

# Meet CouchDB

[www.softacad.bg](http://www.softacad.bg)

1. Introduction to CouchDB
2. Create, Update, Remove, Query Operations
3. Views & Aggregation
4. Concurrency
5. Replication
6. Pros and cons
7. Resources

- ▶ Data is stored and returned in JSON format
- ▶ Queried via HTTP RESTful API
- ▶ Index building language: Javascript
- ▶ Simple and intuitive interface

```
{  
  "_id": "debd7e7385464f4874dd2a38043f7825",  
  "_rev": "3-839e43865b653a1ed73c3d21cc17c5dd",  
  "name": "Homer",  
  "last_names": ["Simpson", "Duff"],  
  "phone_numbers":  
  {  
    "mobile": "555-666-777",  
    "work": "666-777-555",  
    "bar": "777-666-555"  
  },  
  "interests": ["beer", "donuts", "couches"]  
}
```

# Key

```
{  
  "day": [ 2010, 01, 23 ],  
  "products": {  
    "apple": {  
      "price": 10  
      "quantity": 6  
    },  
    "kiwi": {  
      "price": 20  
      "quantity": 2  
    }  
  },  
  "checkout": 100  
}
```

- Create:
  - HTTP PUT /db/test
- Read:
  - HTTP GET /db/test
- Update:
  - HTTP PUT /db/test
- Delete:
  - HTTP DELETE /db/test

# Querying the database

- ▶ Views: the way to arrange data to answer our questions
- ▶ Method to build views:  
Incremental MapReduce using Javascript

# DEMO Map Reduce

# Example

```
{  
  "id": 1,  
  "day": 20100123,  
  "checkout": 100  
}
```

```
{  
  "id": 2,  
  "day": 20100123,  
  "checkout": 42  
}
```

```
{  
  "id": 3,  
  "day": 20100123,  
  "checkout": 215  
}
```

```
{  
  "id": 4,  
  "day": 20100123,  
  "checkout": 73  
}
```

## How to find sum(checkouts) ?

```
{  
  "id": 1,  
  "day": 20100123,  
  "checkout": 100  
}
```

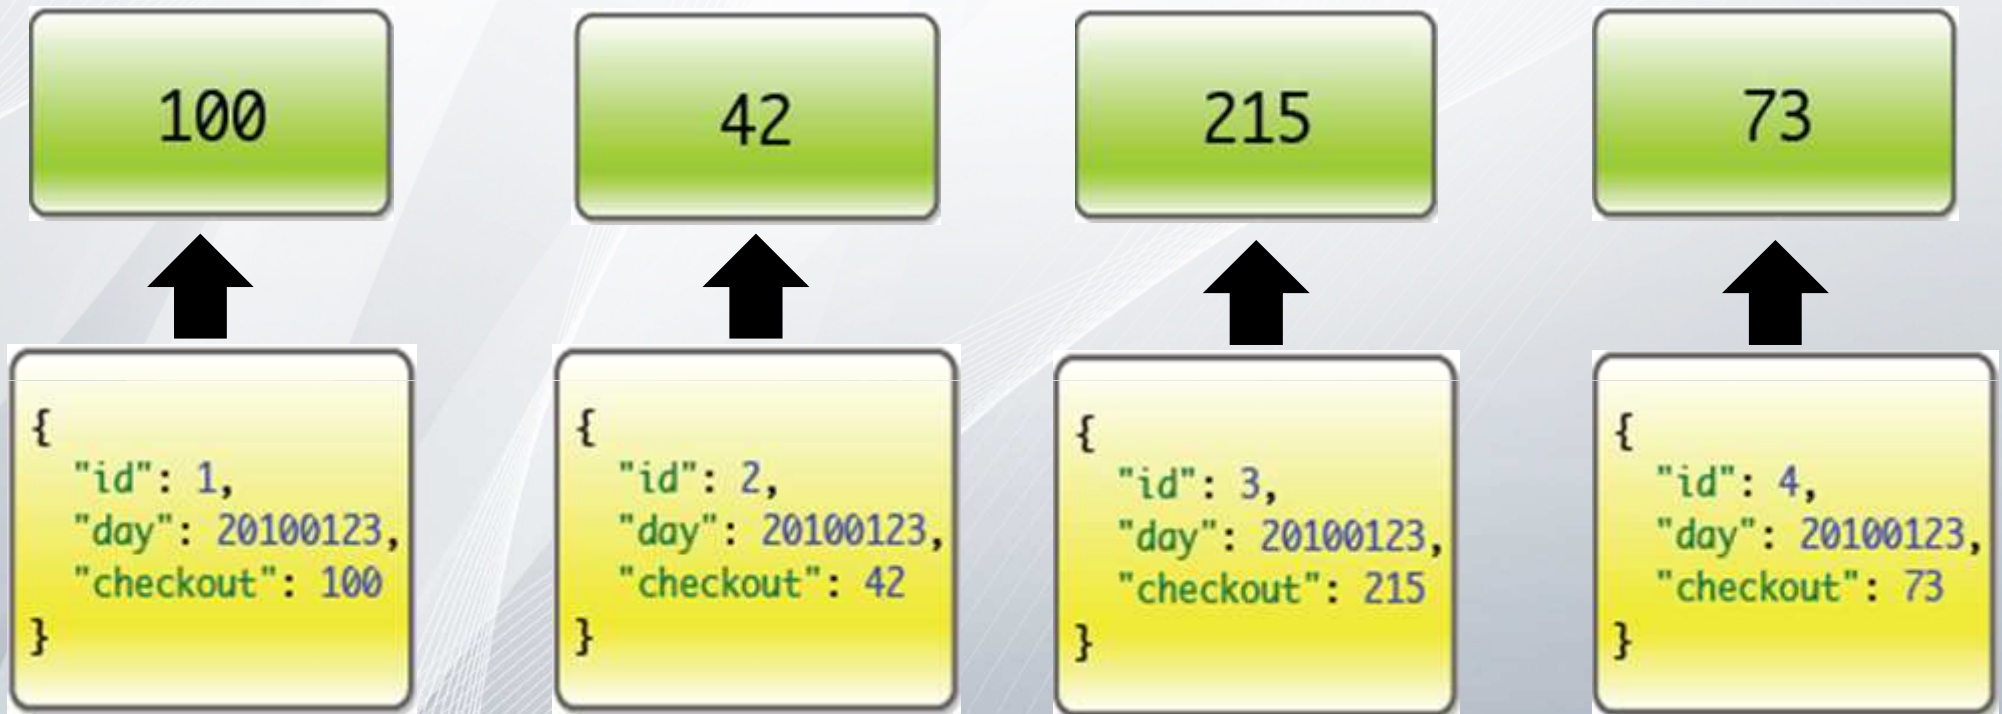

```
{  
  "id": 2,  
  "day": 20100123,  
  "checkout": 42  
}
```

```
{  
  "id": 3,  
  "day": 20100123,  
  "checkout": 215  
}
```

```
{  
  "id": 4,  
  "day": 20100123,  
  "checkout": 73  
}
```

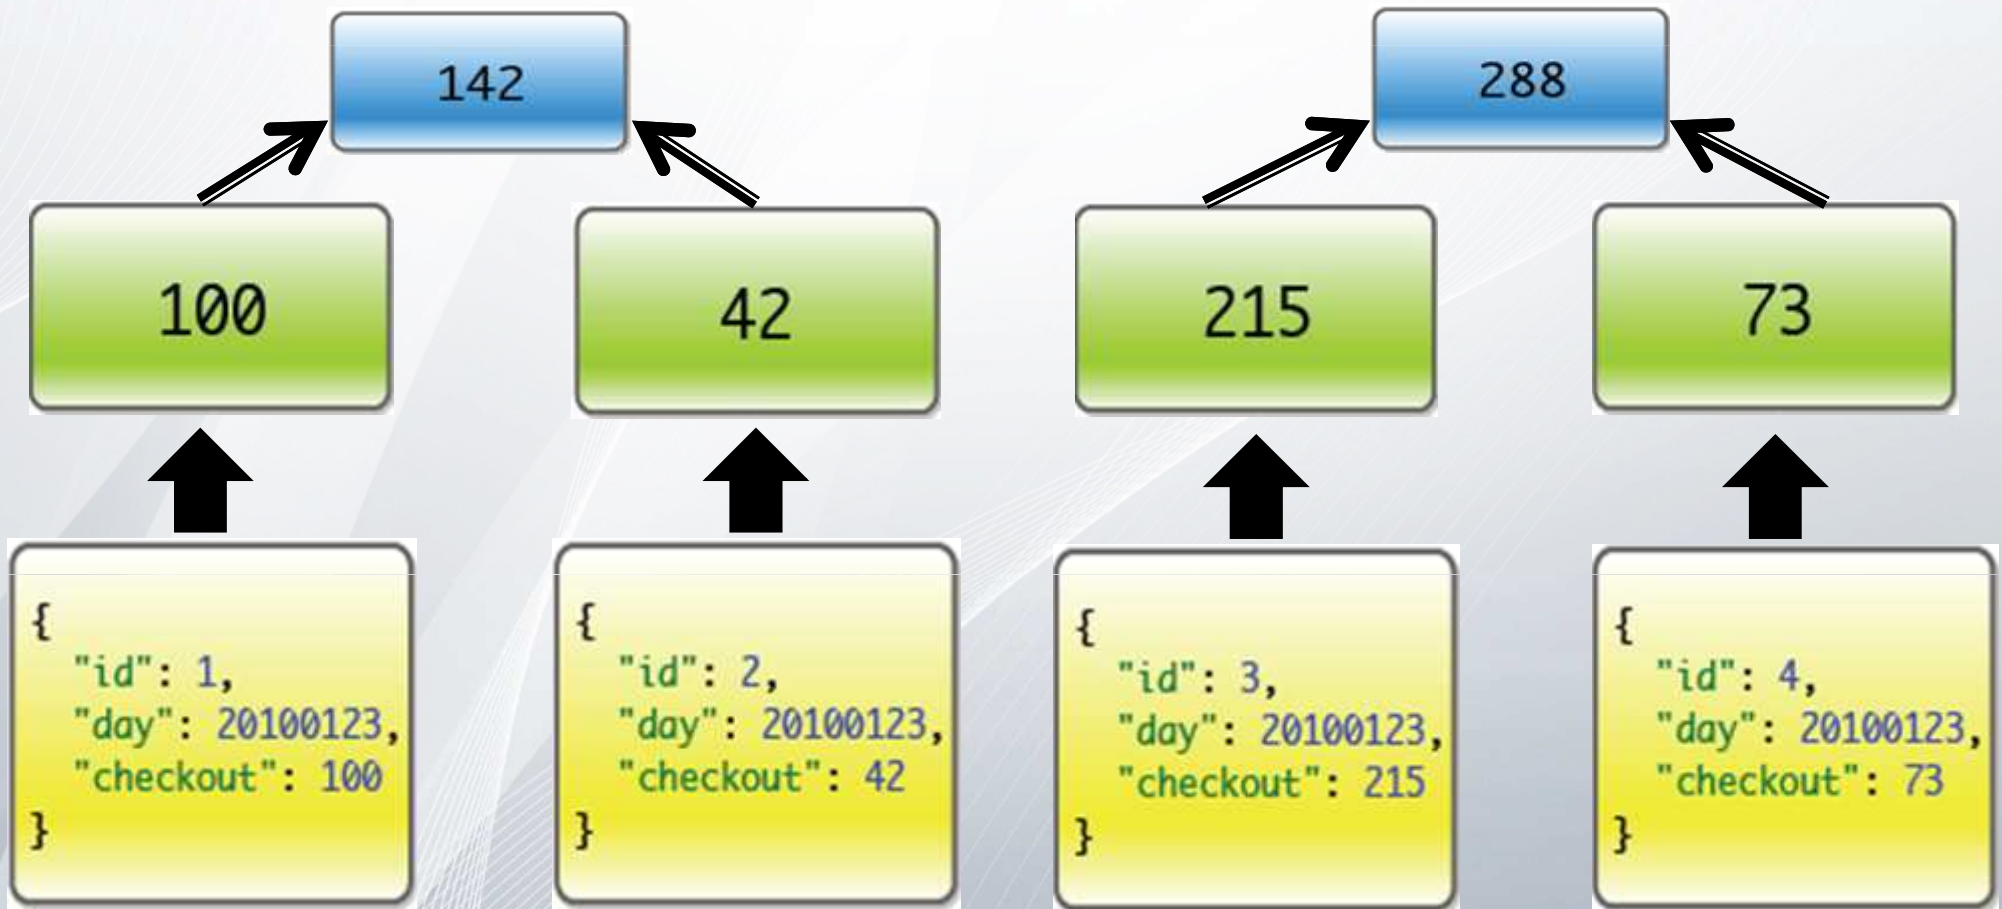

## Simple Map : emit(checkout)

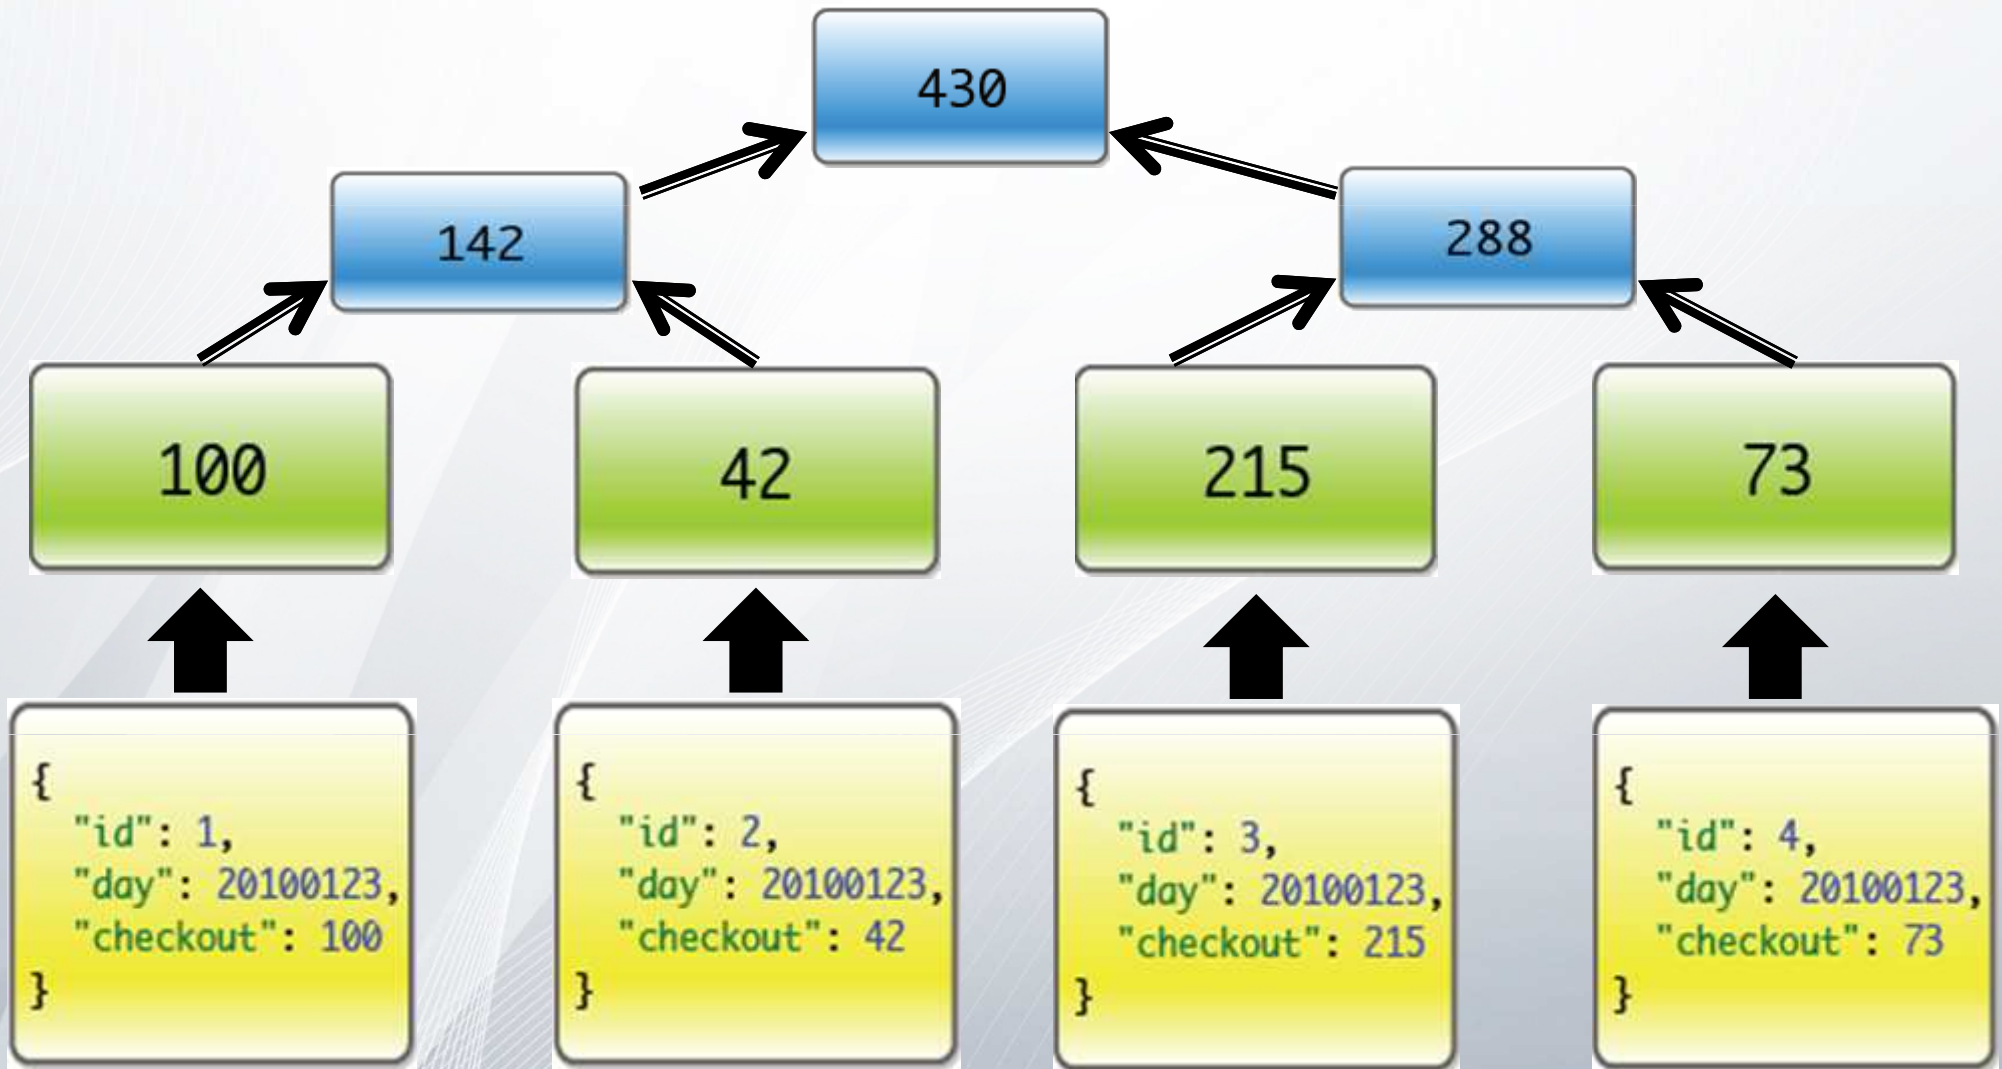

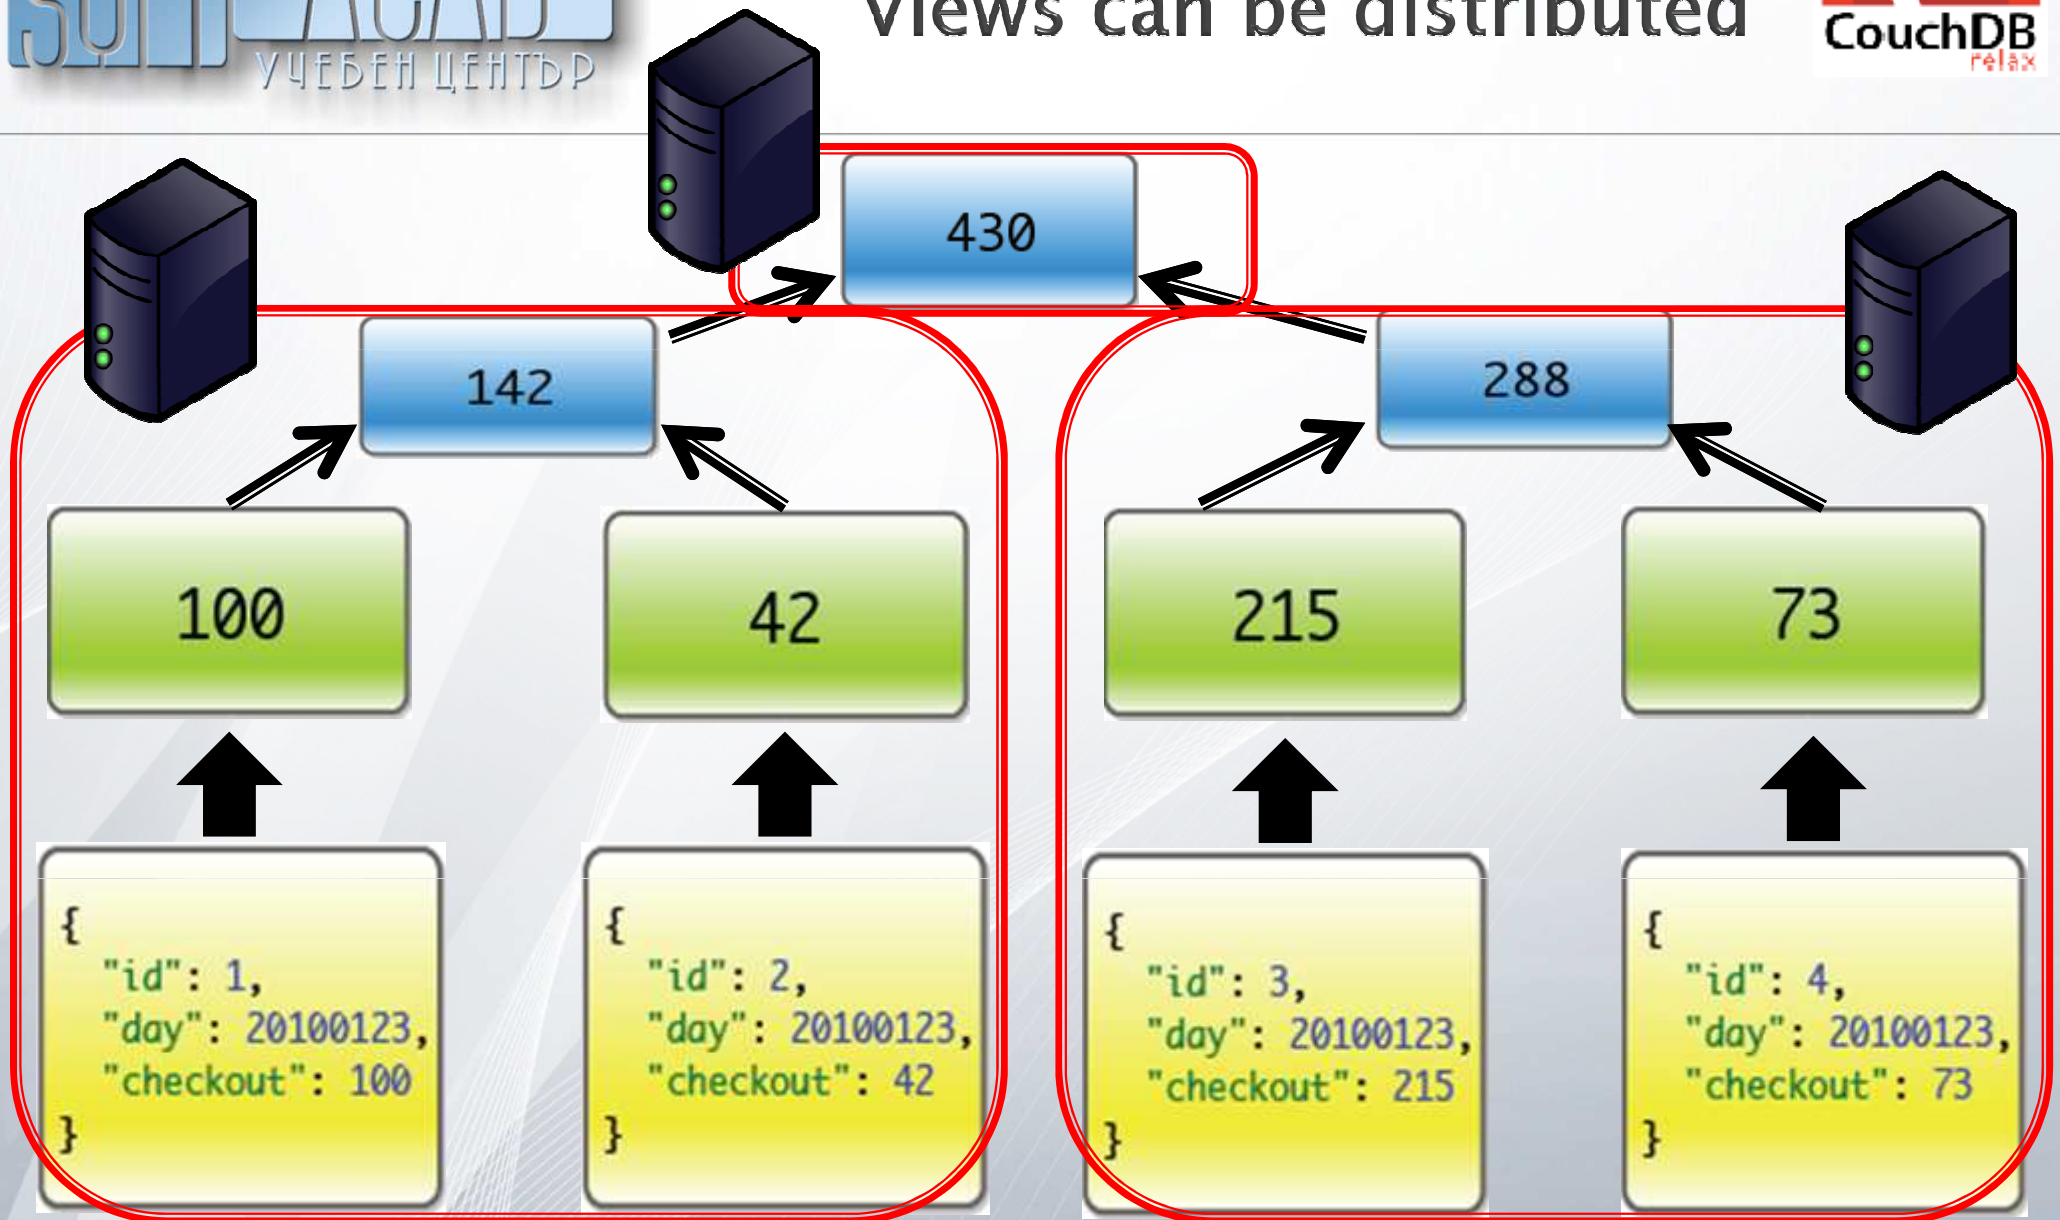

## Simple Reduce : sum(checkouts)

# Simple Reduce : sum(checkouts)

- ▶ Views are useful for many purposes:
  - Filtering the documents in your database to find those relevant to a particular process.
  - Extracting data from your documents and presenting it in a specific order.
  - Building efficient indexes to find documents by any value.
  - Use these indexes to represent relationships among documents.
  - With views you can make all sorts of calculations on the data in your documents.

# Typical document(2)

```
{  
  "_id": "debd7e7385464f4874dd2a38043f7825",  
  "_rev": "3-839e43865b653a1ed73c3d21cc17c5dd",  
  "name": "Homer",  
  "last_names": ["Simpson", "Duff"],  
  "phone_numbers":  
  {  
    "mobile": "555-666-777",  
    "work": "666-777-555",  
    "bar": "777-666-555"  
  },  
  "interests": ["beer", "donuts", "couches"]  
}
```

CouchDB

## CouchDB

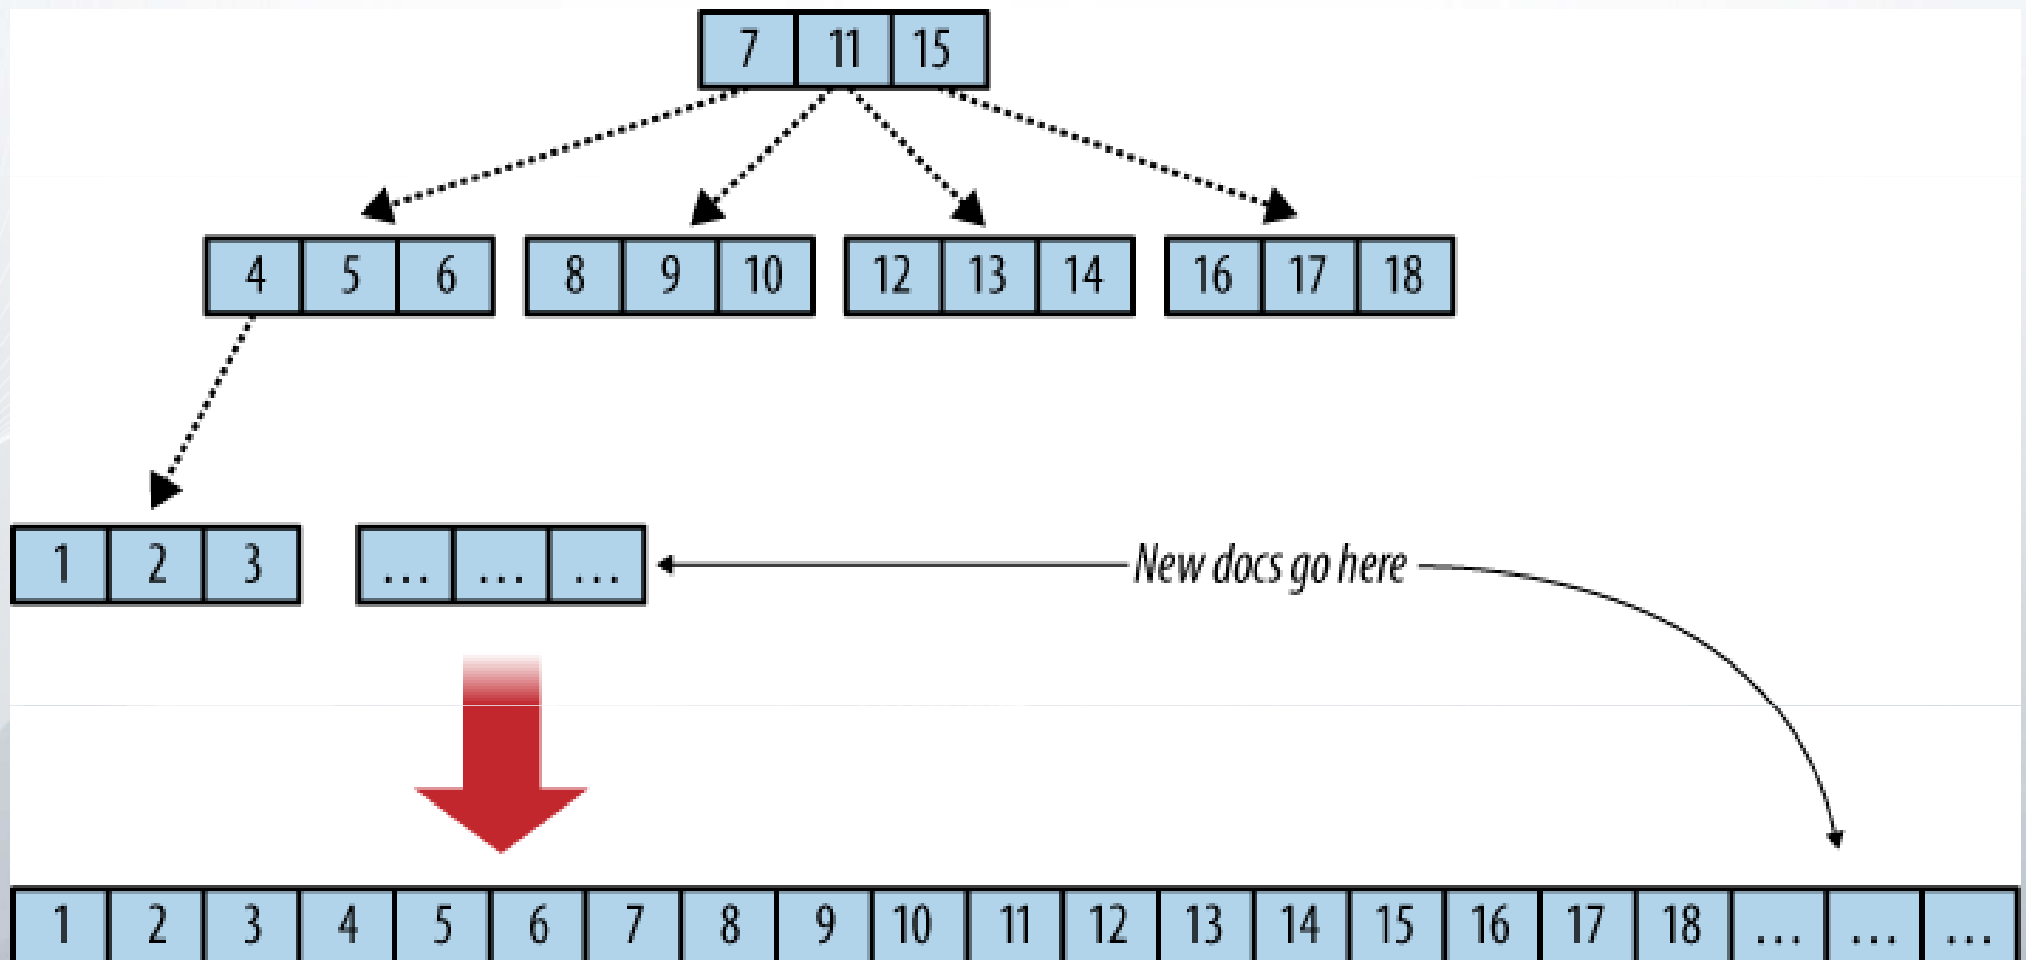

- ▶ MVCC means no locking !

# Under the hood

- ▶ What is replication ?
- ▶ It could be bidirectional
- ▶ Offline by default
- ▶ Continious replication

# How to start replication?

- ▶ POST /\_replicate  
{  
  "source": "database",  
  "target": "http://example.org/database"  
}
- ▶ By using Admin UI

Overview > Replicator

Replicate changes from:

☒ Local Database:

☐ Remote database:

to:

☒ Local database:

☐ Remote database:

☒ Continuous

Event

```
{"ok":true,"_local_id":"cf0aed3b694388092e3999d16d2595aa"}
```

No replication

# Why CouchDB ?

- ▶ Fault tolerant ( it's written in Erlang )
- ▶ Intuitive REST/HTTP interface
- ▶ Easy replication
- ▶ Deep structures and no schemas
- ▶ Stable and scalable, so it is successful in production
- ▶ The only database solution optimized for mobile

# Why not CouchDB ?

- It's too new
- There is no security model
- Too slow for building views
- Doesn't support fancy SQL queries

# I want more!

- ▶ Get it from here:

<http://couchdb.apache.org/downloads.html>

- ▶ Case studies :

<http://www.couchbase.com/customers/case-studies>

- ▶ Practice Map Reduce:

<http://blog.mudynamics.com/wp-content/uploads/2009/04/icouch.html>

# Meet MongoDB

[www.softacad.bg](http://www.softacad.bg)

1. Introduction to MongoDB
2. Create, Update, Remove Operations
3. Querying MongoDB
4. Concurrency
5. Indexes
6. Aggregation
7. Replication (Sharding)
8. Pros and cons

- ▶ Scale out rather than scale down
- ▶ Replace the row with the more flexible document
- ▶ Built for speed
- ▶ Drivers available for large range of programming languages
- ▶ Almost no administration needed

# CRUD

- ▶ Create
- ▶ Update
- ▶ Delete

- ▶ `find` and `findOne`
- ▶ Query Criteria and Conditionals
- ▶ Type – Specific Queries
- ▶ `$where`

- ▶ Database level locking
- ▶ Yielding

- ▶ Almost identical to relational database indexes
- ▶ Geospatial indexes

- ▶ count
- ▶ distinct
- ▶ group
- ▶ Map/Reduce

- ▶ Master–Slave Replication
- ▶ Sharding

- ▶ Pros: scalable, fast, flexible, almost administration free
- ▶ Cons: no atomic operations, no validation

# CouchDB vs. MongoDB

- ▶ MVCC (Multiversion concurrency control)
- ▶ Horizontal scalability
- ▶ Query Expression
- ▶ Atomicity
- ▶ Durability
- ▶ Map Reduce
- ▶ Javascript
- ▶ REST
- ▶ Performance
- ▶ Use cases

# Questions?

# Thank you
